

What is it ?

Knovel is an excellent resource that provides access to over 800 engineering and scientific references, handbooks, standards, and databases. These are all available online as e-books from more than 30 science/technology publishers and professional societies such as McGraw Hill, John Wiley, Elsevier, the American Institute of Chemical Engineers and the American Society of Mechanical Engineers.

Entries are divided into 17 subject areas which are fully searchable and available to browse. Subject areas range from: [Adhesives, Coatings, Sealants and Inks](#) to [Electrical and Power Engineering](#) to [Plastics and Rubbers](#). The content is indexed for ease of searching and formatted so that all titles are easily navigable via a simple Table of Contents structure.

Examples of resources available in full-text are: ASME handbooks, the Civil Engineer's Reference Book, Structural Steel Designer's Handbook, and the Encyclopaedia of Scientific Units, Weights and Measures.

Searching: [Basic Search](#) is the first search screen available. This is a simple keyword search in which you can search all text, or just for an author or a title. You can also search within all the 17 subject areas or you can limit it to one that might be more relevant to your search. When typing in a phrase make sure you enclose it in quotation marks so that the whole phrase will be found. Results of your search will be displayed as titles. Rolling over the titles with the mouse will give you a short description of what the item is.

[Fielded Search](#) is a more advanced search in which you can search for specific keywords or suggest your own. You can use the Boolean operators (And, Or, Not) to limit or widen your search. You can also search within the full-text of all resources available. This may provide you with a very large set of results which you can then narrow down by refining your search.

You can also [Browse](#) through the resources available by clicking on the subject areas you are interested in. Here you can look at new titles that are being added to the database.

At any time you can click on the [Search Tips](#) tab to get hints on how to perform your searches so that you get the most out of them.

How to Access it:

- Knovel Library is available through the DIT Library's databases list at <http://www.dit.ie/DIT/library/resources/databases/index.html>
- Remote Access - It is also possible to access the Knovel Library database remotely. If you need information on this you can access the following link <http://www.dit.ie/DIT/library/az/access/index.html> or alternatively contact the library desk.
- If you need any help using the Knovel Library database please don't hesitate to contact the library desk
