

Accessing Google Services on an Android Device Using a DIT Staff Account

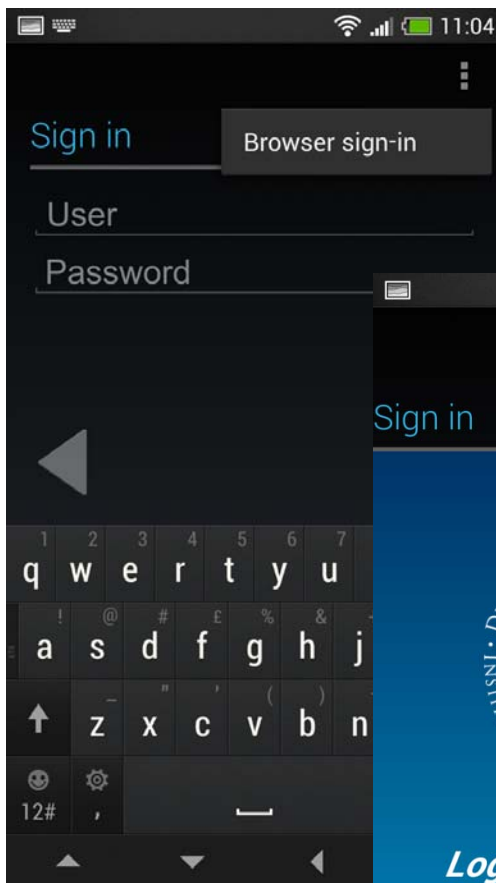

We suggest setting up your portable devices to use IMAP to connect to Gmail. By default, all DIT accounts on Google have IMAP access enabled.

Android devices authenticate against Google via the DIT's IDP server. To manage your password for this account, please register with www.mypassword.dit.ie.

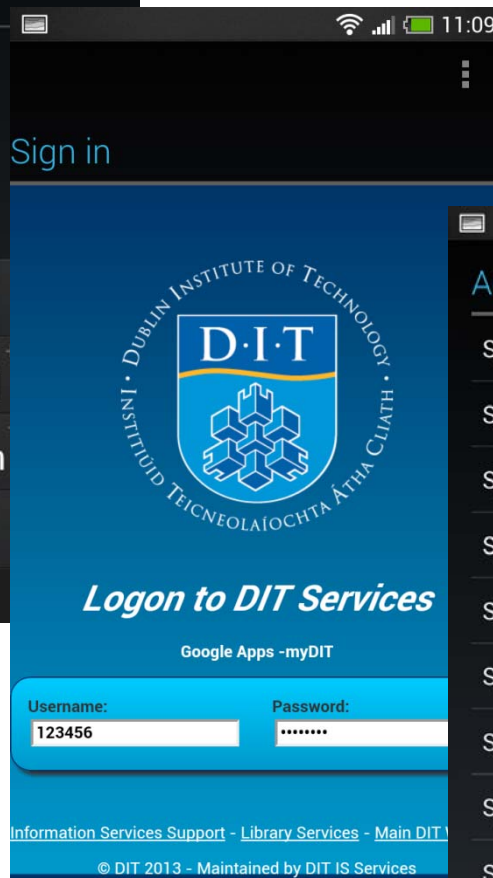

- 1) Within the **Settings** menu on your Android device, select Accounts & Sync, Add Account (top of the screen), and select Google.

- 2) Add an Existing Account to your device, and at the sign in page, choose **Browser Sign-In** from the menu.

- 3) Sign into the DIT's IDP page with your staff number and password.

- 4) Choose which of this account's Google Services you wish to sync with your Android device.
