Are you ready to convert?

DIT taught postgraduate programmes are especially attractive to graduates who want to build on their undergraduate degree, but who are now ready to specialise and to develop the expertise required to take their career to the next level. Many 'conversion' programmes offered by DIT can help to do just that.

For example, keeping pace with fast-moving technology means many graduates are keen to update their skills. With the growth in media technology, the School of Media has developed programmes in Creative Digital Media and mobile and web apps, while Food Product Development might attract those with an interest in the growing culinary market.

Graduates in Engineering and Built Environment can enhance their careers by adding qualifications in quantity surveying, building

information modelling, retrofit technology, geographic information science (GIS), or supply chain management. Science graduates may consider qualifications for future roles in Pharmaceutical Quality Assurance or Validation.

Graduates seeking to progress in their current company, or to apply for new roles, may benefit from a better understanding of key aspects of business – whether that's accounting, management, marketing or HR. The College of Business in DIT has a suite of programmes aimed at applicants with a strong undergraduate degree in other disciplines. Delivered over one or two years, full-time or part-time, they involve working in teams on projects, case studies and presentations, as well as completing a dissertation.

Details of DIT conversion programmes can be found at www.dit.ie/conversion
