How to do your Referencing: Numeric Style

This help sheet aims to give you basic guidance on referencing using Numeric style. For other styles like Harvard system, please refer to Library Helpsheet 30. You should only use one style consistently all over your work. A good practice in keeping track of your research is, make a list of references you consulted when you BEGIN your research process.

This helpsheet covers:

A. Why do we need to reference? p.1
B. The difference between a reference list and a bibliography p.2
C. The main differences between Numeric and Harvard Styles p.2
D. Citing references within the text (i.e. in-text citations) p.2
E. Listing references (citations) at the end of your work (i.e. Reference List)
   - Books / E-books p.3
   - journal articles p.4
   - Websites p.5
   - Other documents:
     - Reports p.5
     - Thesis, Conference papers, Patents, Standards, Government publications p.6
     - Blackboard materials p.7
   - Personal communications
     - Lectures / presentation p.7
     - Emails p.7
     - Weblogs p.7
F. Compiling a bibliography p.8
G. Using RefWorks p.8
H. Further help p.8
**A. Why reference? In brief**

- Proves that substantial research has been done to support our analysis
- Enables others to follow up on our work
- Gives credit to other people’s work
- Avoids charges of plagiarism. For more information on plagiarism, please refer to Library Helpsheet 4.

**B. Reference List and Bibliography**

- **Reference list** – a list of sources we have cited in our text arranged in the order they appeared within the text. It is usually put at the end of our work but it can also appear as a footnote (at the bottom of the page), or endnote (at the end of each chapter) which serves a similar purpose.
- **Bibliography** – a separate list of sources we have consulted but not specifically cited in our work including background reading. It is arranged alphabetically by the author’s surname.

**C. There are two main differences between the Numeric and Harvard style**

- The way material is cited in the text and at the end of the work. Numbers are used instead of the author’s last name to identify a source in the text. The list of references at the end is arranged in numerical order.
- The position of the date.

**D. Citing references within the text (i.e. in-text citations)**

In the Numeric style, sources are identified by a number, starting with 1. These numbers relate to a numbered list of sources (reference list) at the end. See example below:

<table>
<thead>
<tr>
<th>Inside your essay:</th>
<th>At the end of the essay:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Citing references within the text:</td>
<td>Reference list:</td>
</tr>
<tr>
<td>…………………the suggestion of technology in the home has been explored by Baron [13] extensively. It was echoed by Thomas who pointed out that the Internet and email would bring the office into the home [14 p.56] within the next year.</td>
<td>12……………</td>
</tr>
<tr>
<td>……..however, the solution mentioned by Baron [13 p.124] was too far from what the present technology can offer…..</td>
<td>13. M. Baron. Technology in the home. Computers Tomorrow, 1996, 13(4), 123-125.</td>
</tr>
<tr>
<td></td>
<td>16…………………..</td>
</tr>
</tbody>
</table>

p.12 p.103
Note when citing references within the text

1. The numbers can be placed within brackets or as a superscript, e.g. (1) or [1] or \(^1\).

2. Use the same number of the first citation if you refer to the same document again. Add page number(s) to indicate different parts if necessary.

3. When you are directly quoting from a source, use quotation marks “ ” or indent it if it is a long quote.

   Example: Weber suggested that "the great success of plasma today can be ……….." (2, p.277)

4. Use \textit{et al.} to indicate a source with three or more authors.

   Example: Thomas, Darlington and Smiths (5) suggested that science is………

5. Never cite a source based on an abstract or you have not seen in full. You should always try to track down the original source. If this is impossible and you wish to include findings of another author as reported in a piece of work, you must mention that piece of work in your text.

   Example: The findings by Colin Smith cited by Jones (13, p.167) indicated that………

E. Listing references (citations) at the end of your work (i.e. Reference List)

This list is arranged in numerical order at the end of your work in the order they appeared in the text. Please refer to these examples for the citation elements.

Books / E-books

Author's (or editor) initials and family name. \textit{Title of book}, Edition (other than 1\textsuperscript{st}). Place of publication: Publisher, year, page number of your quotation. For e-books, we need to include the host information, URL address and the date of access.

For books with two or three authors, list them all. For books with more than three authors, use the first author only with initials and surname followed by "\textit{et al.}". However, please check with your lecturer as some prefers to list them all. The IEEE style allows up to six authors.

### Chapter in book

Author's initials and family name. Chapter title. *In:* Editor (ed.), *Title of book.* Edition (other than 1st). Place of publication: Publisher, year, page number.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>

### Journal articles

If the same article is available in both print and online form, treat it as the print edition. i.e.

Author's initials and family name. Title of article. *Journal title,* Year, **volume** (issue number), page number of your quotation.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>

### E-journal article available from database host

If the article is taken from a database host, use the same principle but add the access and host information.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>

Note: It the article is available as both print and electronic versions, it is acceptable to cite the print version without the need to quote the online address and the accessed date. IEEE journals and transactions are normally available as both versions.

### E-journal article directly from the web

If the article is not from any specific database host, use the same principle and spell out the exact URL address fully.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>

Websites

Try to reference to a specific section of the website instead of the general homepage. Look further than the page itself to investigate for the ownership of the website. Check the credits and the host of the page. Corporate author can also be used if available, or the Title of the document. The organisation responsible for hosting the web page may be regarded as the publisher.

Author (or editor). Title of the website, year. [Online] Available from: URL address [Date accessed].

Notes:
- Websites are more difficult to trace because of the dynamic nature of the Internet. We need to give as much information as possible for our readers to be able to track them down.
- A good web site should have sufficient ownership information to enable you to cite.

Reports

They can be published by statutory authorities, professional bodies or commercial suppliers. In some cases, we can treat it as a book. We need to include:

Name of issuing body. Title of publication. Report number and other information where relevant. Place of publication: Publisher. Date of publication. Put any online access details if relevant.

Thesis / Dissertations
Author’s initials and family name. Title of thesis. Degree, awarding body, year.

Conference papers
The proceedings of conferences are sometimes published as books, usually with an editor. Reference it as a book in this case. If you are giving reference to a paper within a proceeding, follow the general principle but add the details of the conference, i.e. Author’s initials and family name. Title of paper. In Title of conference, location of conference, date of conference. Place of publication: publisher (if available), year, page number(s). Add online access details if relevant.

Patents

Standards
Author of the standard (usually a corporate author). Standard number and year (separated by a colon). Title of the standard. Place of publication: Publisher, year.

Government publications
Author (usually a Government department). Title of document. Place of publication: Publisher (usually the Stationery Office), year.

Blackboard materials

Lectures / presentation
Name of lecturer / speaker. Title of the lecture / presentation. Lecture delivered in / Speech presented at Unit name, Unit code / Conference name. Place, Organiser / conference information, date of the lecture / presentation.

Note: It may be easier to use the slide as the reference point rather than the speech.

Personal email messages
Name of sender. *Message subject / Title*. Personal e-mail to: name of recipient. Date of message.

Weblogs (blogs)
Author's initials and surname. Title of blog entry. *Title of the Blog*. Date of the entry. [Blog entry] Available from: URL address [Accessed Date].

Note: When we use blogs, please evaluate the content carefully. Blogs are user-contributed pages where the information has not been peer reviewed.
Note when compiling reference list at the end

1. Use the abbreviation ‘Ibid’ ('in the same place') to refer to two or more consecutive citations from the same source.

2. Use the abbreviation 'Op. cit.' ('in the work [already] cited') to refer to work that has been cited already on the list, and include enough information so that the original reference can be identified.

3. Look for the copyright date © if there is no clear date available. If it cannot be traced at all after thorough investigation, state clearly ‘no date’.

4. Some researchers prefer to put the surname first, e.g. Lunn, C. instead of C. Lunn. This is also acceptable by some lecturers. Please check with him/her.

F. Bibliography

This list includes a list of readings you have done but not directly cited in your text. It is arranged alphabetically by the author’s last name (because there are no corresponding numbers in the text!). The citation style remains the same. For example:

- **British Standards Institution.** *BS 5605: 1990. Recommendations for citing and referencing published material*. London: BSI, 1990. [Note: this publication is available from the British Standards Online database]
- **Pears R. and Shields G.** *Cite them right: the essential guide to referencing and plagiarism*. Whickham: Pear Tree Books, 2005. [Note: this publication is available in the Perry Library: 025.324 PEA]

G. Using RefWorks to manage your references

You can also use the referencing tool RefWorks to manage your references. It is available on the library homepage under Engineering E-resources, or [http://lispac.lsbu.ac.uk/record=b1276570](http://lispac.lsbu.ac.uk/record=b1276570). You may want to choose the IEEE style, or the Vancouver style which is also a numeric citation system, as your output style.
